Tel: (510) 651-8289

PASMA 1st Annual Summer Barbecue Lunch
Served at 11:30 am
\$20 for members / \$25 for guests
RSVP: pasma.north@gmail.com

WATCHDOG WORKER ALERT SYSTEM

Presented by Tom McCarthy, Du-All Safety

This System is intended to help save the lives of road workers and law enforcement employees. This unit is ideal for any crew of 1 to 6 working in and around traffic. The Watchdog can easily be installed on emergency response vehicles such as ambulances and other emergency response vehicles to protect the workers.

Concept

The radar will detect a vehicle that is traveling at an unsafe speed within an unsafe proximity of the people being protected. The unit will alert those in danger by means of either a siren or air horn, giving those potentially in harm's way enough notice to take evasive action, should it be necessary.

Functionality

The System, through established algorithms and well-proven software, calculates the distance and speed, then sets off an alarm when the vehicle is at the minimum evasive reaction time and traveling at a speed that is above what is considered safe.

Attend the Meeting

See how the system works, and if it can keep your employees safe on roadway work zones!

RSVP to pasma.north@gmail.com

Please advise of cancellations no later than 48 hrs prior
